

MAYLIM OXFORD NORTH

Photography: Alister Thorpe

THE CONTRACTOR

Maylim delivers complex public realm, landscape and external works. At Oxford North, it led the Stage 4 landscape design and delivery package, coordinating landscape, civil, structural and M&E elements.

PROJECT OVERVIEW

Oxford North is a 64-acre innovation district bringing together science and technology workspace, homes and public landscape. Phase 1 includes Fallaize Park and the central public realm. CORE supplied just over 1,500 linear metres of PRO EDGE aluminium edging through Maylim for path, planting and soft-landscape interfaces.

1,500+ LM CORE PRO EDGE

KEY REQUIREMENTS

The extensive public realm combines long straight interfaces with sweeping paths, lawns, meadow and densely planted beds. Edging had to deliver consistent alignment over significant distances, form accurate curves, withstand external conditions and remain discreet within the planting-led design.

PRODUCT

CORE PRO EDGE is a professional edging system made from marine-grade 6063A aluminium alloy. Supplied in 2.2m lengths, the anodised profile forms true straight runs and controlled curves around paving, aggregate, lawns and planted areas.

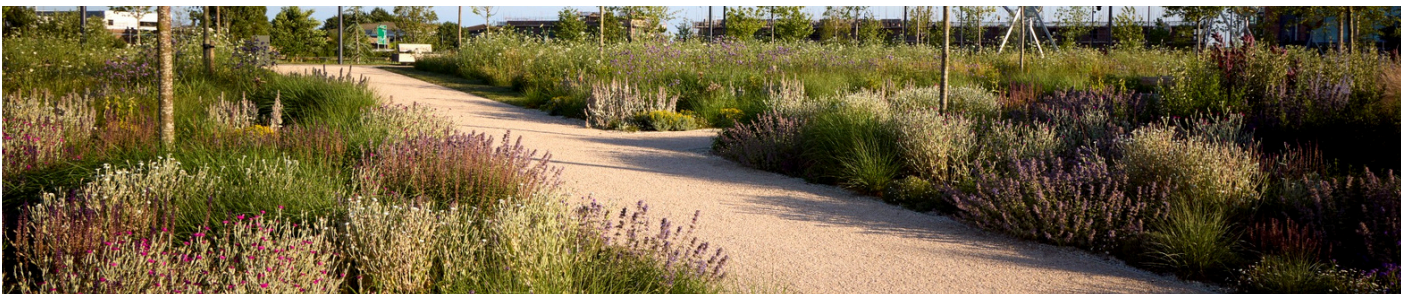

Over 1,500 linear metres of CORE PRO EDGE create consistent, precise interfaces throughout the public realm.

Completed photography: Alister Thorpe

SOLUTION

Maylim installed CORE PRO EDGE to define paths and planting across the public realm. Profiles were aligned to the landscape geometry, joined into continuous runs and secured before adjoining surfaces were completed. The aluminium edge delivers consistent lines across more than 1.5km while remaining discreet in the finished landscape.

DURABLE ALUMINIUM

Marine-grade anodised aluminium provides a durable, low-maintenance edge.

ACCESSIBLE ROUTES

Crisp, consistent boundaries help keep path edges clear and legible.

PRECISE CURVES

Flexible 2.2m profiles form sweeping arcs or true straight runs.
