

MS CONTRACTS MANAGEMENT BOOTH'S PARK COURTYARD

THE CONTRACTOR

MS Contracts Management delivered the courtyard landscape for Bruntwood, following Layer.studio's design. We supplied CORE DATUM EDGE to define the paths, lawns and planted beds throughout the scheme.

PROJECT OVERVIEW

At No.1 Booth's Park in Knutsford, a former paved courtyard has become a greener place to meet, take a break and spend time outdoors. Designed by Layer.studio for Bruntwood, the landscape connects planted beds, lawns and social spaces with flowing paths.

1,100 LINEAR METRES

APPROX. SUPPLIED | CORE DATUM EDGE

KEY REQUIREMENTS

The courtyard needed clear, durable edges around paths, lawns and planted beds, with a profile that could follow the design's changing curves and levels.

PRODUCT

Our 150mm Corten CORE DATUM EDGE follows the courtyard's sweeping curves and straight runs. Its warm steel finish complements the planting, while providing a neat, durable boundary between adjoining landscape surfaces.

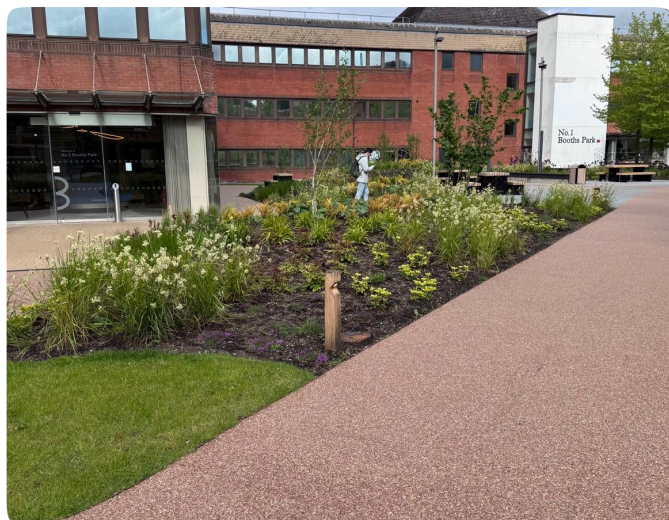

The detail that brings it together: a slim Corten edge between the paths, lawns and planting.

Edging at Booth's Park

SOLUTION

We supplied approximately 1,100 linear metres of 150mm Corten CORE DATUM EDGE to MS Contracts Management.

The edging follows the courtyard's flowing paths and planted beds, keeping adjoining surfaces neatly separated. Its warm Corten finish sits naturally alongside the planting and helps give the landscape a consistent, considered finish.

Project photography supplied by MS Contracts Management.

FLOWING CURVES

Forms sweeping curves and straight runs to follow the landscape design.

NEAT BOUNDARIES

Defines paths, lawns and planting with a clear, consistent edge.

WARM CORTEN FINISH

Weathering steel develops a rich patina that complements the planting.

The courtyard layout connects paths, lawns and planted beds.

Planting gives the courtyard a softer setting.

Slim steel edging defines the lawn and path.

A CONSISTENT EDGE

Across the courtyard, the same Corten edging follows the changing landscape geometry. Close to the ground, its slim profile keeps the focus on the planting while maintaining a clear boundary between surfaces.
