

THE SCHOOL RENOVATION COMPANY IWM DUXFORD WESTON PLAY ZONE

THE CONTRACTOR

CORE supplied The School Renovation Company with aluminium edging for the Weston Play Zone. Designed by Davies White, the scheme brings together specialist play equipment, accessible routes, colourful surfacing and planting at IWM Duxford.

PROJECT OVERVIEW

The £1.2m Weston Play Zone brings Duxford's aviation story to life. A playful aircraft, parachute shelters and a sweeping walkway sit alongside sensory planting and quieter spaces, creating an inclusive family attraction where children can explore and play together.

CORE PRO EDGE

24mm + 120mm

KEY REQUIREMENTS

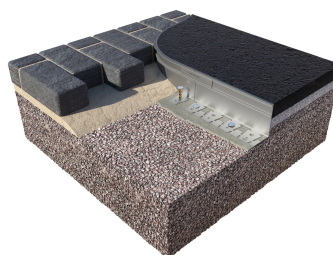

The play landscape called for clean edges that could follow its flowing layout. Different surface depths needed suitable profiles, with a durable finish for a busy outdoor visitor attraction.

PRODUCT

CORE PRO EDGE gave the team a practical way to achieve neat, lasting edges within a landscape full of curves. Its aluminium profile forms straight runs or flowing lines, giving surfaces a firm edge to finish against without distracting from the design.

One profile can hold a straight line or form a curve. Remove the Easy-Snap tabs where the design changes direction.

SOLUTION

CORE supplied 24mm and 120mm CORE PRO EDGE profiles, together with galvanised fixing pins.

The two heights gave the contractor options for different surface depths, while the flexible aluminium system supported the straight lines and curves required by the scheme.

STRAIGHTS & CURVES

Easy-Snap tabs allow the same profile to create straight runs and smooth curves.

A CLEAN FINISH

A slim, defined edge gives surfaces a neat line to finish against.

BUILT FOR OUTDOORS

Anodised aluminium provides a durable, corrosion-resistant landscape edge.
