

DECORATIVE CONCRETE SPECIALISTS LITTLEHAMPTON SEAFRONT

THE CONTRACTOR

CORE supplied Decorative Concrete Specialists with the galvanised DATUM EDGE package for the Littlehampton seafront works. Neillcott Construction was the main contractor for Arun District Council's wider regeneration scheme.

PROJECT OVERVIEW

Littlehampton's £7.23m seafront regeneration has created a new destination for residents and visitors. The West Green brings together water play, sports courts, coastal planting and places to sit, alongside food kiosks, improved paths and accessible visitor facilities.

200lm DATUM EDGE

GALVANISED STEEL FOR THE SEAFRONT

KEY REQUIREMENTS

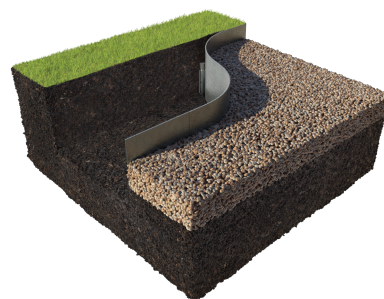

Define clean boundaries between landscape materials with a robust edge that follows straight runs and curves. The team needed reliable restraint and accurate levels to achieve a neat finish.

PRODUCT

CORE DATUM EDGE formed the flowing divisions between the light sand, blue and yellow surfaces. The steel lengths follow the curves, giving each area a crisp outline and a firm edge to finish against. A small detail with a big role in the final design.

The metal edge is a small part of the finished view, but it makes those sweeping curves and clean colour changes possible.

CORE DATUM EDGE - galvanised product render

Shaping the surface boundaries during construction

SOLUTION

CORE supplied Decorative Concrete Specialists with 200lm of 150mm galvanised DATUM EDGE.

The edging follows the curves between the light sand, blue and yellow surfaces, giving the contractor a firm line to finish against. These discreet metal divisions help keep the bold shapes crisp and clearly defined.

SHAPED TO THE DESIGN

Flexible steel follows the sweeping curves between the coloured surfaces.

CRISP COLOUR DIVISIONS

Defined metal boundaries give each surface a clear edge to finish against.

PRECISE LEVEL CONTROL

DatumLock lets installers fine-tune the height to achieve the required finished level.
