

WILLINGCOTT VALLEY COASTAL HOLIDAY VILLAGE

THE CONTRACTOR

CORE supplied the Willingcott project through Jewson and Gibbs & Dandy, bringing together products for gravel paths, driveways, reinforced grass and edging to support the site's varied landscaping needs.

PROJECT OVERVIEW

Set across more than 100 acres near Woolacombe, Willingcott brings contemporary holiday homes into the rolling North Devon landscape. Timber-clad buildings, open green spaces and winding routes make the outdoors part of the experience, with the coast close at hand.

290m² CORE PATH PRO

GRAVEL PATH STABILISATION

KEY REQUIREMENTS

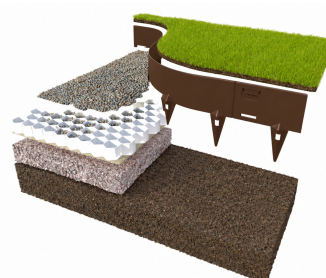

Keep gravel routes comfortable and stable, support vehicle use and retain a natural feel, with clear boundaries between paths, grass and planting.

PRODUCT

We supplied CORE PATH PRO, CORE DRIVE, CORE GRASS and CORE EDGE HD XL for Willingcott. Stable gravel routes, reinforced grass and neat boundaries work together, while the 65mm brown steel edging gives the landscape a clean finish alongside the timber buildings.

The natural look of gravel, with stability beneath the surface - a finish that belongs in the landscape.

SOLUTION

Our supply brought four CORE products together for the Willingcott landscape, including 440 linear metres of brown CORE EDGE HD XL heavy-duty steel edging.

Stable gravel for paths and drives, support beneath grass and a clean edge where surfaces meet: each product serves a different need, helping the team retain the natural character of the setting.

NATURAL CHARACTER

Gravel and grass finishes complement the timber buildings and surrounding countryside.

GRAVEL THAT STAYS PUT

Cellular grids hold gravel in place, helping create firmer paths and driveways.

A NEAT FINISH

Brown CORE EDGE HD XL defines surface transitions with a discreet, consistent boundary.
